Automation Engineer specializing in Backend development and AI-powered computer-vision solutions for scalable mobile and web testing

ABOUT ME

Automation-focused Front-End & Backend engineer with strong experience designing UI components, backend services, and full E2E automation infrastructures across mobile and web. Skilled in building scalable test frameworks, API layers, CI/CD pipelines, and intelligent tooling. Hands-on experience in AI-driven automation, including designing, training, and deploying computer-vision models for mobile testing, building training datasets, optimizing inference performance, and integrating CV detection into automation workflows. Proven ability to mentor engineers, define architecture standards, and drive quality-focused delivery in fast-paced environments.

TEAM LEADERSHIP & DIRECTION OWNERSHIP

- Guided engineers in automation, frontend, and backend development, including mentoring, onboarding, and code reviews.
- Led architecture decisions for automation frameworks, backend integrations, testing strategy, and quality standards.
- Collaborated with Product, QA, and DevOps stakeholders to align automation strategy with release timelines, quality goals, and AI-based tooling adoption.
- Promoted knowledge-sharing, documentation discipline, and engineering best practices across teams, including AI integration into testing workflows and scalable backend services.

EXPERIENCE

Bank Leumi, Tel Aviv–Lod — Automation, Backend & Front-End Developer

2024 - PRESENT

Cross-Platform Automation & AI-Driven Tooling:

- Developed an AI-based computer-vision model using YOLO, including dataset creation, annotation workflows, model training, fine-tuning, and validation processes to detect UI elements inside the mobile app. This significantly improved automation resilience, reduced locator dependency, and enabled dynamic element recognition even under UI changes.
- Designed and owned automation frameworks for iOS, Android, and Web using Appium, Selenium, and Perfecto.
- Built CI/CD pipelines with Jenkins, Allure Report, and automated test triggers for stable, scalable execution.
- Implemented modular, maintainable, and parallel-ready testing architecture supporting frequent releases.

Front-End Development & Accessibility:

- Developed scalable features in React Native, including cross-platform UI components and stateful logic.
- Implemented accessibility layers including screen-reader support, focus navigation, i18n, and WCAG 2.1 compliance.

Backend & Tooling:

- Built developer utilities, internal APIs, and automation services to support testing environments and data provisioning.

Spool-CarFully, Herzliya — Full-Stack (React Native & Node.js) Developer

2023 - 2024

- Developed a collaborative travel & car-sharing platform with React Native including full frontend architecture.
- Built the backend side in Node.js end-to-end: routing, authentication, business logic, and integrations.
- Designed and implemented the trip distribution algorithm including prioritization rules and real-time updates.
- Implemented CI/CD pipelines using AWS, Docker, and isolated staging/production environments.

EDUCATION

Mefathim, Bnei Brak

2020 - 2022

Data Structures & Algorithms, Programming in Python & JS, Operating Systems, Networking, Web & Database Development

SKILLS

AI & Computer Vision: YOLO, dataset preparation, model training for automation, CV-based element detection

Backend Development: Node.js, NestJS, REST APIs, authentication flows, business logic design

Automation Engineering: Appium, Selenium, Perfecto, XCUITest, Allure, Jenkins, parallel execution architectures

Frontend: React Native, React, UI/state architecture, accessibility (WCAG 2.1), i18n

Programming: Java, TypeScript, JavaScript, Python

DevOps & Infrastructure: AWS, Docker, Linux, CI/CD pipelines, Git

Quality & Testing Strategy: E2E workflows, test design, accessibility validation, framework architecture

LANGUAGES

Hebrew (Native)
English (Proficient)
